SUMMARY

Third-year Computer Science student at BINUS University, specializing in Intelligent Systems, with a strong interest in machine learning, artificial intelligence, and AI system development. Experienced in building and evaluating predictive models using Python, Scikit-learn, TensorFlow/Keras, Pandas, and NumPy. Adaptable to emerging technologies and focused on developing practical, data-driven AI solutions.

EDUCATION

BINUS University | Bachelor of Computer Science **August 2024 - Present**

- **GPA**: 3.87/4.00
- **Activities & Societies**: SASC Scholarship Mentor, Ureeka Core Team Member, Sigma Club Member, FP B2029
- **Honors & Achievements**:
  - S-Class Student (Top 12%)
  - Gold Medalist of ISIF (International Science and Invention Fair) (2026)
  - 3rd Winner of BMC TechSprint Innovation Cup (2026)
  - Top 8 Finalist of ICT Business Plan HOLOGY 8.0 (2026)

WORK & ORGANIZATION EXPERIENCE

Ureeka - Human Resource Team Member **March 2026 – Present**

- Tracked member progress and KPIs through structured Personal Development Plans (PDP) to support continuous growth and performance evaluation.
- Managed end-to-end recruitment, from candidate screening to onboarding, while conducting satisfaction surveys to strengthen team culture.
- Coordinated communications across divisions to ensure operational deadlines were consistently met.

SASC - Scholarship Mentor **September 2025 – Present**

- Mentored 5 mentees with a focus on improving their academic performance and overall GPA.
- Conducted regular check-ins to monitor progress, provide study strategies, and help set achievable academic goals.
- Supported mentees in managing workloads, developing discipline, and academic performance.

PROJECTS

Handwritten Prescription Word Classification | Source Code

- Developed a lightweight machine learning framework combining HoG, LBP, Gabor Filters, and Zernike Moments to classify handwritten medical prescription words across 4,680 images and 78 medication classes.
- Applied PCA for dimensionality reduction (95% variance retained) and benchmarked SVM, KNN, and Random Forest classifiers using GridSearchCV with 5-fold cross-validation.
- Achieved 76.41% accuracy and 76.68% F1-Macro with feature fusion + SVM, a 4.41-point improvement over standalone HoG, processing 4,500+ samples in ~48.5 seconds on CPU-only hardware.

Credit Scoring & Risk Analytics Platform | Source Code

- Built an end-to-end credit-risk pipeline estimating Probability of Default (PD) on historical Lending Club data, using leakage-audited feature selection and chronological train/validation/test splitting.
- Benchmarked Logistic Regression, LightGBM, XGBoost, and CatBoost, selecting XGBoost with isotonic calibration (0.70 ROC-AUC, 0.39 Gini) via Optuna tuning, then applied SHAP for model explainability.
- Deployed via FastAPI and Streamlit, translating PD into a FICO-like credit score and an Expected Loss-based approval cutoff (64.6% approval rate at 14.7% default rate), validated with automated unit tests.

SKILLS & LANGUAGES

Languages: English (Professional working proficiency), Indonesian (Native)
Programming Languages: Python, SQL.
Data & Machine Learning: Scikit-learn, TensorFlow/Keras, Pandas, NumPy, Matplotlib, OpenCV
Tools & Platform: Git, GitHub, VS Code, Jupyter Notebook
